What is Podiatry?

Podiatry is a field of medicine devoted to the study and treatment of disorders of the foot and ankle. This is a highly specialized discipline and is very popular in the Western countries. The education curriculum varies among countries, but it has the most extensive development in the United States of America. All podiatrists in the USA are second degree at the doctoral level, and most are granted surgical privileges and Rx prescription rights.

Our medical professionals are American trained **Doctors of Podiatric Medicine**, with extensive clinical and surgical experiences to treat foot and ankle conditions. We are licensed foot and ankle specialists in the state of California, USA.
